

Creating an Application

Default Application

By default, every account has an empty Application called **SampleApp** which you can see directly from the Dashboard.

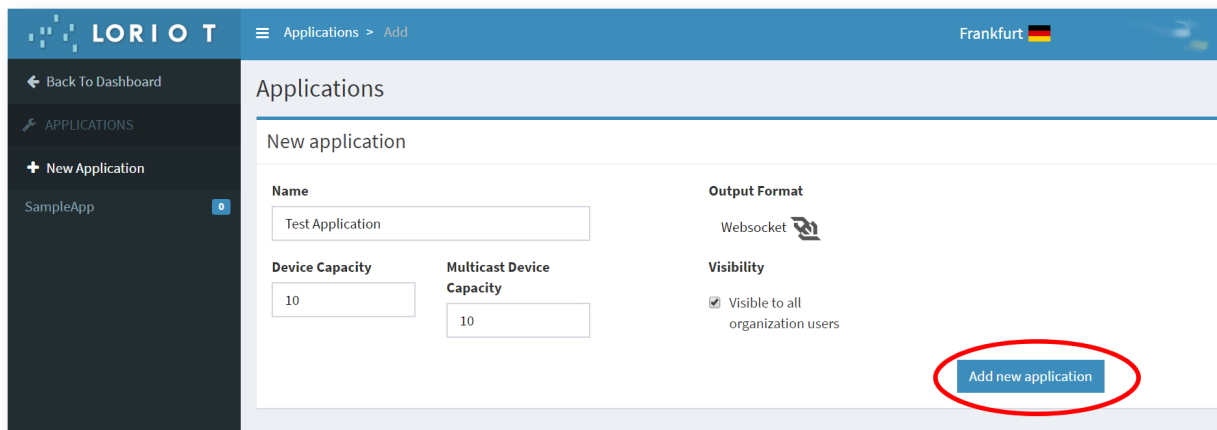

Name	AppID	Devices
SampleApp	BE-7A-1B-63	0

You can use this Application to register your devices.

Create a New Application

- If you wish to add a new network, select the green button "+ Create New Application" from the Dashboard.
- Alternatively, go to the **Applications** tab in the left-side menu and click on the option **+New Application**:

Applications > Add Frankfurt

New application

Name
Test Application

Device Capacity
10

Multicast Device Capacity
10

Output Format
Websocket

Visibility
 Visible to all organization users

Add new application

Fill out the Application name and the desired device capacities but keep in mind that **it must be a multiple of 10** and it's not allowed to exceed the overall account device capacity limit.

You can also select whether this Application shall be visible to other organization members (if applicable).

Finally, click on "**Add new application**".

Once complete, you can select the new Application and the next step is **Enroll a Device**.
